HTTP GET,POST methods :

HTTP defines a set of **request methods** to indicate the desired action to be performed for a given resource.
In order to send information browser client to webserver, we use **GET** and **POST** methods.

GET: Data is requested from a specific resource.
POST: Data is submitted to be processed to a specific resource.

	GET	POST
1	It is used for getting information from server side.	It is used to post information to the server.
2	Performs readonly operation.	Performs update/write operation.
3	Whatever the request can be sent, that is appended with the URL.	Whatever the request sent to to the server is not exposed in the URL.
4	Only text/ character type data can be sent.	Any type of data can be sent.
5	Limited amount of data can be sent(upto 2kb)	No length limit of data that we can send.
6	Provides less security because user s request is directly exposed in URL bar.Hence sensitive data should not be sent.	Provides high security.
